

**SHORT PARAGRAPH
DESCRIBING PROJECT**

**TITLE AS
QUESTION**

1. The purpose of a science project display is to communicate the important parts of your project to others. Your audience can be your teacher, classmates, parents, or science fair judges.
2. The diagram above shows the proper arrangement of the sections required for the display.
3. Start early. A good display board is the result of many hours of work. Begin now to think about what it will look like. Remember glue takes time to dry!
4. The display should be three-sided, with two of the sides or "flaps" able to fold inward.
5. The flaps should be able to close without being damaged by anything glued or attached to the surfaces of the display.
6. It is also important that the display fold up completely so that it may be stacked efficiently with others while being stored.
